

## "An Introduction to Ancient Greek and Roman Coinage"

Jackson Gordon's presentation will cover the origins and evolution of coinage in Ancient Rome and Greece, the design and symbolism as well as the materials and minting techniques of this coinage. He will then discuss a comparison between ancient and modern coins. Finally, his presentation will cover some of the most famous coins from Ancient Rome and Greece.

Jackson began collecting coins in 2023 and this is his second year as a member of the Manitoba Coin Club. Since discovering that just about anyone has the ability to own affordable coins from thousands of years ago, Jackson has begun collecting and researching ancient coins, with a focus on Greece and the early Roman Empire. The bulk of his collection currently consists of Canadian coins, but he also has an interest in US coins and unique world coins.

I also re-attached your portrait, so that it's likewise handy to use in the publicity.

We are most grateful for your generosity to offer to give a presentation and we are very much looking forward to it, now re-scheduled for Sept. 13/25!
